**Review the following for Wi-Fi connection issues.**

- Coway products support only 2.4 GHz for Wi-Fi (5 GHz not supported).
- To make a Wi-Fi connection, check if your smartphone is online. Run the app, enable Wi-Fi, and select your AP.
- Wi-Fi routers and cables needed are sold separately. For instructions on Wi-Fi connection, contact your internet provider.
- Install the router closer to your Coway product. Depending on a distance between them, network connection stability can vary.
- Because of poor network or firewall, a connection is not made. If a connection is not made or there is a problem in network settings, contact your internet provider.
- Set the SSID(Wi-Fi name) of the router by combining alphabets and numbers. If other characters are used, it may not be possible to make a connection.
- If a network connection is not possible even with internet provider's support, contact our customer center.
- After a Wi-Fi connection is established, it takes some time to stabilize communication.

**IoCare may not be compatible with tablets and other devices.**

- Android OS 4.4 or later
- iOS 10.0 or later
- No limit for Android/iOS resolution

**IoCare features may differ by product. They can be changed without a prior notice.  
Also, IoCare features require Wi-Fi connections.**
